ANNUAL MAIN ENGINES AND GENERATOR SERVICE:

Organise vessel to be towed from Quakers Hat bay to The Spit.
Carry out annual service to 2 x D6 370 Volvo Penta engines.
Prepare engines for mechanical repairs, lay decking with protective matting.
Check Volvo Penta partner network for outstanding software updates.
Check Volvo Penta partner network for outstanding quality campaigns.
Check over engines for leaks, corrosion and visual damage.
Change engine oils, oil filters and by pass oil filters.
Change primary and secondary fuel filters, split water separators, clean and re assemble.
Prime fuel systems.
Remove raw water pumps, change impellers and associated face plate seals.
Refit pumps and connect hoses and brackets.
Clean sea strainers baskets and re seal housings with replacement seals.
Change all cooling system anodes.
Check heat exchanger and after coolers housings for leaks and corrosion.
Check and top up coolant levels.
Change air and crank case filters.
Check and tension belts, engine mounts and hose clamps.
Check battery cables and electrical connections.
Check supercharger oil level and condition.

COOLING SYSTEM SERVICING:

Attend to vessel in berth, D'albora Marina's, The Spit.
Carry out cooling system servicing to 2 x D6-370I-B Volvo Penta diesel engines.
Drain coolants from both circuits, inspect for contamination.
Disconnect and remove heat exchangers, after coolers and oil coolers.
Check all hose condition.
Bung vessel. Carry out engine room detail.
Return to workshop, dismantle all heat exchangers.
Chemical clean cores, clean all housings and surfaces.
Inspect housings, cores and all sealing surfaces for corrosion and cracks.
Re assemble units using all new o-rings, gaskets and grease.
Pressure test after coolers after assembly. Report findings.
Prime and paint cooling system housings and components.
Remove exhaust droppers, inspect condition and turbo conditions.
Clean surfaces and refit exhaust droppers using high temperature sealant.
Prepare engine blocks and engine bay ready for cooling system installation.
Lift heat exchangers, after coolers and oil coolers into place.
Tension all retaining bolts, connect plumbing and tension clamps.
Fill circuits with fresh water, purge air from systems.
Install new coolant pressure caps.
