

JEANNEAU

Fast Facts...

NEW SUN ODYSSEY | 350

Walkaround side decks:

Unique to Jeanneau and an innovation in eliminating the need to step over cockpit coamings to move forward on the deck, or to step through the lifeline gates on the dock.

Larger 29hp Yanmar:

Ample power when needing to push into breeze or a seaway. Shaft drive eliminates sail drive service costs and issues associated with keeping the intake clear.

Integrated bow-roller:

Allows the anchor to be ready to deploy at all times while remaining clear of mooring lines and setting sails.

The latest in hull naval architecture:

Includes a reverse shear and negative bow which increases manoeuvrability, lightens the helm and increases the effective waterline underway.

Deep sloping anchor locker:

Allows chain/warp to run and means that a cockpit remote can be optioned.

Room to move below:

1.95m headroom throughout and no doorway sills for safe movement throughout the interior.

Optional additional 130 litre water tank:

Significantly increases water capacity, and also allows water to be carried while keeping weight out of the bow.

Easier reefing process:

Releasable forestay for storm jib and mast support when reefing in strong winds.

Flat deck Furler option:

In the Performance Pack provides the ability to increase headsail area.

Fuller hull form:

Creates more space below and the V-berth is 15cm wider than its predecessor.

Optional IRO deck UV stabilised timber:

Available for cockpit seats and floor.

New factory options:

Include larger battery capacity, fans, Corian countertop, solar and electric winch on coach roof.
